ACKNOWLEDGMENTS

1. The Examiner acknowledges receipt of the amendment filed 11/7/05 wherein claims 1-19, 21, and 22 are canceled and claim 20 is amended.

Note: Claims 20 and 23-31 are pending.

RESPONSE TO APPLICANT'S AMENDMENTS/ARGUMENTS

2. The Applicant's arguments filed 11/7/05 to the rejection of claims 20 and 23-31 made by the Examiner under 35 USC 103 have been fully considered and deemed non-persuasive for the following reasons.

The rejection of claims 20 and 23-31 under 345 USC 103(a) as being unpatentable over Rhodes (US Patent No. 5,102,990) in view of Grog et al (US Patent No. 4,510,125) is MAINTAINED for reasons of record in the office action mailed 5/3/05 and those set forth below.

Applicant asserts that the instant invention is distinguished over the cited prior art because the claim has been amended to state that the second container consists essentially of a stabilizer selected from a Markush grouping.

Applicant is respectfully requested to review MPEP 2111.03 which is directed to transitional phrases. In particular, Applicant's attention is directed to the section which discloses that 'a consisting essential of' claim occupies a middle ground between closed claims that are written in a consisting of formation and fully open claims that are drafted in a 'comprising' format. Thus, for the purposes of searching for Applicant's invention and applying prior art under 35 USC 103, in this instance, absent a clear

Art Unit: 1618

indication in the specification or claims of what the basic and novel characteristics actually are 'consisting essential of' will be construed as equivalent to 'comprising'.

Hence, the cited prior art rejection is deemed proper.

It is also noted that in columns 5-6, bridging paragraph, the protein substrate to be radiolabeled is admixed with a stannous chloride solution and the resulting solution is purged of oxygen. Thus, indicating that a first vial may contain only the protein solution (protein substrate and stannous chloride). Then, since in column 7, lines 45-48, it is disclosed that a mixture comprising a protein and radionuclide reducing solution which was frozen or lyophilized, may be stabilized by the addition of a carrier protein that was not included in the original vial. Thus, motivation is provided to have a separate vial containing the stabilizer especially, if you have a kit that is distributed to medical facilities wherein all ingredients necessary to perform the diagnostic procedure are included in the kit.

COMMENTS/NOTES

3. Applicant is respectfully requested to replace 'said protein' with 'said antibody' to correct the antecedent basis in independent claim 20.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
